iscovery.com and my Doylestown Research Team website doyletrans.com.Q: What's the fastest way to write a dataframe to text? There are a few things that I would like to do with a bunch of pandas dataframes that are written to.txt files. I would like to be able to open the.txt files and see each column in the dataframe. This could be one line of text per column, or there could be multiple lines per column. There are a few things I would like to do with each dataframe that I could do with a Pandas Dataframe. However, I'd like to do the easiest thing first. I would like to be able to do the following: import pandas as pd df = pd.DataFrame([[1, 2], ['a', 'b'], ['x', 'y'], ['z', 'w']], columns = ['a', 'b', 'c', 'd']) # I'd like to be able to do the following here # a b c d # 0 1 2 NaN NaN # 1 a 82157476af
